| Education                  | <b>Kyrgyz-Turkish Manas University – Applied Math and Informatics</b><br>Sep 2020 – June 2021<br><b>Eötvös Loránd University – Computer Science BCs</b><br>Sep 2021-Jan 2025                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Experience                 | <b>Tutoring (Feb 2021 – May 2021)</b><br>Math tutoring for high school students in preparation for the official government test.<br><b>Data annotator, Tech Mahindra (Aug 2022 – Dec 2022)</b><br>Identifying patterns and understanding the meaning behind the words used, with a focus on virtual assistant interactions.<br><b>Python Developer Intern – Climate Software Engineer Intern, MSCI (June 2023-)</b><br>At MSCI, I focused on developing internal applications using Python, with an emphasis on Django for building end-to-end features within the ESG & Climate sector. My work involved implementing classes, crafting functions, and scripting to produce XML files, while also utilizing Pandas and NumPy for data processing. I collaborated closely with cross-functional teams, ensuring seamless project delivery using Git and maintaining workflow efficiency via Azure DevOps. Additionally, I ensured the quality of my code through rigorous testing using pytest and validated APIs with Postman. My role also provided exposure to financial modeling fundamentals. |
| Extracurricular activities | <b>Volunteering in Election (September 2020 – November 2020)</b><br>Volunteered as a tech support. Mainly working with excel and MS Word, managing voters' data.<br><b>Competitive programming (<a href="#">LeetCode</a>)</b><br>Solved 500+ questions on topics: Dynamic programming, DFS, BFS, Backtracking etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Projects                   | <b><a href="#">Minesweeper</a></b> (using Java (Swing) and MySQL)<br>-Single-player logic-based game, where the main aim is to find the “mines” in a rectangular board.<br><b><a href="#">Light Bulb game</a></b> (using HTML/CSS/JS)<br>-Bulb placing game on a board, where you must illuminate each cell while avoiding other bulbs illuminating each other<br><b><a href="#">Voting page</a></b> (using HTML/CSS and PHP)<br>- Web application where users cast their votes on polls, admin users can create single option or multiple option polls with deadlines<br><b><a href="#">Time Complexity Analyzer</a></b> (using Django and React, scipy)<br>- Web tool analyzes the time complexity of code within set constraints, offers algorithm visualizations, and includes quizzes and key features for deeper understanding.<br><b><a href="#">Bomberman</a></b> (using TypeScript and React)<br>- Team-based game, players use bombs to combat monsters and foes. Development followed TDD principles, utilizing Git, CI/CD, and UML class diagrams, structured around user stories.     |
